DFD for PocketSmart AI

Flow description: The user enters authentication details or planner inputs. FastAPI validates and routes the request. The selected planner context is sent to Gemini AI, which generates recommendations. Results are returned to the frontend, while recommendation activity can be available through history/session data. External shopping/service platforms are used as recommendation sources/context.

DFD Symbol Legend

Symbol / Type	Meaning	PocketSmart AI Example
External Entity	Actor outside the process	User
Process	Transforms input into output	Authentication, planner processing, AI recommendation
Data Store	Stores information for later use	Recommendation history / session data
Data Flow	Movement of information	Budget, preferences, image, recommendations
