Team ID	6ab222a5e880316a482c6374
Project Name	PocketSmart AI
Team Members	Joison V, Gurun J, Sanjai Y, Aswarth U, Yaswanth N
Maximum Marks	3 Marks

Description

PocketSmart AI uses a layered web architecture. The frontend collects user input through HTML, CSS, JavaScript and Jinja2 templates. FastAPI provides backend routing, authentication and session handling. The AI layer uses Gemini to interpret budget, preferences, occasion and optional image context. Results are returned to the frontend, and recommendation history/session data supports continuity. External platforms are referenced as product or service sources.

Architecture Layers

- Presentation Layer – HTML, CSS, JavaScript and Jinja2.
- Application Layer – FastAPI routes and request handling.
- Authentication / Session Layer – registration, login, logout and session information.
- AI Layer – Gemini AI recommendation and image analysis.
- History Layer – previous recommendation activity.
- External Source Layer – shopping/service platforms such as Amazon, Flipkart, IKEA, Swiggy, Zomato and OYO.
