

Performance Testing

PocketSmart AI | Team ID: 6ab222a5e880316a482c6374 | Date: 30 September 2026

Maximum Marks: 5

Date	30 September 2026
Team ID	6ab222a5e880316a482c6374
Project Name	PocketSmart AI
Team Members	Joison V, Gurun J, Sanjai Y, Aswarth U, Yaswanth N
Maximum Marks	5 Marks

Step 1: Testing Overview

Field	Details
Testing Tool Used	Functional/manual testing based on the documented application flows; no dedicated load-testing tool is specified in the source documentation.
Test Environment	FastAPI application with frontend and Gemini AI integration. Exact hardware/network metrics are not documented.
Primary Focus	Budget handling, planner context, AI recommendation display, authentication and history.

Step 2: Test Cases

ID	Scenario	Input Variation	Expected / Documented Check	Result
PT-01	Home planner	Different budget values and room/product quantities	Recommendations should reflect supplied budget/context.	Tested
PT-02	Party planner	Different party types and guest counts	Results should reflect event and budget details.	Tested
PT-03	Jewelry planner	With image	Image-aware recommendation flow should return results.	Tested
PT-04	Jewelry planner	Without image	Text-only recommendation flow should return results.	Tested
PT-05	Authentication	Register, login, logout	Authentication flow should work correctly.	Tested
PT-06	History	Previous recommendation activity	History should be available for review.	Tested

Quantitative performance metrics such as requests/second, latency percentiles and peak concurrent users were not included in the provided project documentation, so no invented measurements are reported here.
