| Maximum Marks | 3 Marks                                            |

## Submission Checklist

| S.No | Item to Submit                               | Submitted           | PocketSmart AI Notes                                                              |
|------|----------------------------------------------|---------------------|-----------------------------------------------------------------------------------|
| 1    | Complete source code (all files and folders) | Yes / package ready | FastAPI backend, templates, static assets and supporting project files.           |
| 2    | README / Setup Guide                         | Yes / recommended   | Should document environment setup, dependencies and run steps.                    |
| 3    | requirements.txt / dependency file           | Yes / recommended   | Python dependencies required by FastAPI, Gemini integration and frontend serving. |
| 4    | Database schema / seed files                 | NA / if not used    | No separate database schema is described in the supplied documentation.           |
| 5    | .env.example or similar                      | Yes / recommended   | Use placeholders for Gemini/API configuration; never commit real secrets.         |
| 6    | Deployed application URL                     | Not documented      | No public deployment URL is provided in the supplied project document.            |

Execution note: The project is documented as a FastAPI application run with Uvicorn. Exact source filenames and deployment URL should be added from the final repository/package before submission.
